About me

When I reached 16, I became interested in programming and started coding for many platforms and try many programming languages. Before that, I was just a casual photographer and editor. These days I work as a full stack java developer. I love coding and finding new ways to be more optimized. I'm also able to build solid relationships with teammates and business partners by fostering teamwork, partnership and collaboration.

Personal information

- Age: 24
- Gender: Male
